Section 1.0: Central Body Gateway Overview & Scope

Document ID: HLD-BCM-2026-003-REV1 | Version 1.0
Domain: Central Body Gateway Controller (ECU_BCM_01)
Architecture: AUTOSAR Classic Platform Release 4.4.0

Primary Subsystem Responsibilities:
- Exterior lighting control (Low beam, high beam, indicators).
- Central locking motors and door entry switches.
- PDU Routing between Automotive Ethernet (SOME/IP) and Body CAN (500 kbps).

Section 2.0: Body Gateway Subsystem Chapter 2

Detailed technical specification for Central Body Controller (Page 2).

Defines gateway routing tables, SOME/IP service identifiers, and diagnostic trouble code records.

Section 3.0: DoorControlSWC & LightMasterSWC Specifications

3.1 DoorControlSWC (ApplicationSWC):
- Periodic Execution: 20ms, ASIL A.
- Port Rp_DoorLatch (Required) -> Interface If_DoorState.
- Port Pp_CentralLockState (Provided) -> Interface If_LockCommand.

3.2 LightMasterSWC (ApplicationSWC):
- Periodic Execution: 50ms, ASIL B.
- Port Rp_LightSwitch (Required) -> Interface If_SwitchInput.
- Port Pp_ExteriorLampCommand (Provided) -> Interface If_LampControl.

Section 4.0: Body Gateway Subsystem Chapter 4

Detailed technical specification for Central Body Controller (Page 4).

Defines gateway routing tables, SOME/IP service identifiers, and diagnostic trouble code records.

Section 5.0: Body Gateway Subsystem Chapter 5

Detailed technical specification for Central Body Controller (Page 5).

Defines gateway routing tables, SOME/IP service identifiers, and diagnostic trouble code records.

Section 6.0: Body Gateway Subsystem Chapter 6

Detailed technical specification for Central Body Controller (Page 6).

Defines gateway routing tables, SOME/IP service identifiers, and diagnostic trouble code records.

Section 7.0: Body Gateway Subsystem Chapter 7

Detailed technical specification for Central Body Controller (Page 7).

Defines gateway routing tables, SOME/IP service identifiers, and diagnostic trouble code records.

Section 8.0: Body Gateway Subsystem Chapter 8

Detailed technical specification for Central Body Controller (Page 8).

Defines gateway routing tables, SOME/IP service identifiers, and diagnostic trouble code records.

Section 9.0: Body Gateway Subsystem Chapter 9

Detailed technical specification for Central Body Controller (Page 9).

Defines gateway routing tables, SOME/IP service identifiers, and diagnostic trouble code records.

Section 10.0: Body Gateway Subsystem Chapter 10

Detailed technical specification for Central Body Controller (Page 10).

Defines gateway routing tables, SOME/IP service identifiers, and diagnostic trouble code records.

Section 11.0: Body Gateway Subsystem Chapter 11

Detailed technical specification for Central Body Controller (Page 11).

Defines gateway routing tables, SOME/IP service identifiers, and diagnostic trouble code records.

Section 12.0: Body Gateway Subsystem Chapter 12

Detailed technical specification for Central Body Controller (Page 12).

Defines gateway routing tables, SOME/IP service identifiers, and diagnostic trouble code records.

Section 13.0: Body Gateway Subsystem Chapter 13

Detailed technical specification for Central Body Controller (Page 13).

Defines gateway routing tables, SOME/IP service identifiers, and diagnostic trouble code records.

Section 14.0: Body Gateway Subsystem Chapter 14

Detailed technical specification for Central Body Controller (Page 14).

Defines gateway routing tables, SOME/IP service identifiers, and diagnostic trouble code records.

Section 15.0: Body Gateway Subsystem Chapter 15

Detailed technical specification for Central Body Controller (Page 15).

Defines gateway routing tables, SOME/IP service identifiers, and diagnostic trouble code records.
